Art Unit: 1636

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 66-113, drawn to an ex vivo gene therapy method, wherein the DNA construct comprises an unpaired splice-donor site, classified in class 514, subclass 44.
- II. Claims 114-168, drawn to an ex vivo gene therapy method, wherein the DNA construct comprises paired splice-donor and splice acceptor sites, classified in class 514, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are mutually exclusive with respect to the presence or absence of the unpaired splice donor site. As such, the modes of operation with respect to the splice donor site are necessarily different.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and because these inventions have acquired separate statuses in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1636

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
